CombiNumerals PRO 4.0

FontSite Inc. proudly introduces CombiNumerals PRO, a new collection of symbol fonts designed for CD and DVD labeling, web graphics, Flash animation, instructional design and documentation, maps, signs, packaging, office forms and more.

CombiNumerals Pro is the commercial big sister to Sean Cavanaugh's popular freeware font CombiNumerals, which is available on the FontSite 500 CD as well as from software download sites all over the Internet. The Pro package adds hundreds more symbols, logos and icons, as well as three new symbol fonts.

Numeric Characters

Like the freeware version, CombiNumerals Pro lets you create any single or double-digit number within a circle, but the Pro version also gives you the ability to create numbers with as many digits as you like.

SINGLE-DIGIT NUMBERS The numbers ① through ⑨ and ⓪ are located on the *qwertyuiop* row of keys (respectively) on a US keyboard. For example, to create the number ①, press the *'q'* key; to create the number ②, press the *'w'* key; and so on.

DOUBLE-DIGIT NUMBERS The numbers ⑩ through ⑨⑨ are created by first typing a number key, followed by Shift-number. For example, to create the number ⑥⑨, press the *6* key, then press *Shift-9*.

Because double-digit numbers beginning with ① can be problematic when it comes to spacing, pre-formed alternates for the numbers ⑩ through ⑲ are provided along the *asdfghjkl;* row of keys (respectively) on a US keyboard. You can still type them as you would other double-digit numbers, but you may find the alternates more visually attractive.

3 + DIGIT NUMBERS You can create numbers of three or more digits within an oval. The first and last digits are created as described above. The interior digits 1 through 9 and zero are located on the *zxcvbnm,./* (bottom) row of keys on a US keyboard. For example, to create the number ④③⑦, press the *4* key, the press the *c* key, then press *Shift-7*. You can also include plus and minus signs as well as decimal points and commas in your numbers.

The Bold weight of CombiNumerals lets you create numerals and symbols within solid circles and ovals.

Alphabetic Characters

New to the Pro version of CombiNumerals is the ability to create alphabetic characters within circles. The uppercase letters A–Z are created by holding down the Shift key and pressing a letter key.

(A) (B) (C) (D) (E) (F) (G) (H) (I) (J) (K) (L) (M)
(N) (O) (P) (Q) (R) (S) (T) (U) (V) (W) (X) (Y) (Z)

Additional Characters

In addition to numbers and letters, with CombiNumerals Pro you can create arrows, monetary symbols, emoticons and other useful symbols. Here are just a few of them:

Whether you agree or strongly agree, CombiNumerals Pro is perfect for creating 'bubble' forms used in surveys, evaluations and questionnaires.

Any character you type can also be a negative using a specially-created slash character. For example, the character ⑦ becomes ⊘. A similar emphasis character can be created, e.g., ⑦ becomes ⑦. Any questions?
